Lucas Alonso

Software developer

Hi, my name is Lucas and I'm a self-taught Software Developer, currently based in Argentina, with professional experience at a Fintech and also as a freelancer. During lockdown in 2020 I started learning the basics of web development without any prior programming knowledge. Quickly I found myself immersed in a new exciting world and since then I've kept on working everyday to learn and master new technologies, create projects on my own to test and improve my skills and overall become progresively a better developer.

SKILLS

HTML & CSS   JavaScript   TypeScript

React   Next JS   SASS   Node JS

MySQL   Git   Cypress   Jest

PERSONAL PROJECTS

Monalisa Hotel
- Inspired by a design I found online, I built a website for a fake 5-stars luxurious hotel set in Amalfi, Italy. A place I'd like to visit one day. The user can find information about all the different types of rooms, read testimonials about the hotel and finally book a room.
- I built this project with NextJS, Typescript, SASS and MySQL. Tested with Jest and Cypress.

New York City Blog
- One of my life dreams is to visit New York City, moved by that dream I created this app. This CMS allows writers to create articles about the Big Apple and admins to control which articles are published and to control the general aspects of the page, managing images and texts for different sections of the layout and the categories in which articles fall into. Readers can search articles by title, by category and also leave comments.
- I created this app with Typescript, NextJS, GraphQL, Apollo, MySQL and CSS Modules. Tested with Cypress
